

Stage: MODERATE

Metadata Snapshot

Name: raj
Age: 58
Gender: Male
Systolic (mmHg): 135
Diastolic (mmHg): 88
BMI: 28.5
Glucose: 155
HbA1c: 7.9
Cholesterol: 210
Smoking: No
Hypertension: Yes
Diabetes Duration: 8

Summary

- Clinical Report — Ophthalmologist
- Patient: Name: raj, Age: 58, BMI: 28.5
- Predicted stage: MODERATE
- Model confidence: 85.29%

- Risk score: 95.8%
- Findings (automated lesion quantification):
 - - Microaneurysms: 27.35%
 - - Exudates: 2.18%
 - - Hemorrhages: 5.48%
 - - Cotton Wool: 0.00%
 - - Neovascularization: 30.00%
 - - Total Lesion Load: 35.02%
- Clinical interpretation:
 - Multiple dot-blot hemorrhages and early exudative changes noted. Consider ophthalmology review and OCT if macular edema suspected.
- Model & Explainability:
 - - Multi-model fusion: CNN ensemble (EfficientNet, ResNet50, ViT) + metadata models (RF, XGBoost, stacked ensemble).
 - - Explainability outputs available: GradCAM++, LIME, SHAP — review heatmaps and overlay masks.
- Performance metrics:
 - - Accuracy: 0.947
 - - F1-score: 0.938
 - - AUC/ROC: 0.971
- Suggested clinical action items:
 - 1. Correlate with slit-lamp exam and fundus exam.
 - 2. If macular edema suspected, obtain OCT imaging.
 - 3. For suspected PDR, arrange urgent retina referral for potential PRP/anti-VEGF.
 - 4. Document lesion masks if available for audit.
