Summary

- Clinical Report — Ophthalmology
- Patient: Sebastian

- Automated Diagnosis:
 - Predicted Stage: Severe
 - Confidence: 83.6%
 - Risk Score: 95.42%
 - Findings:
 - Automated lesion quantification and explainability analyses (Grad-CAM, LIME, SHAP) support the predicted disease stage.
 - Clinical Interpretation:
 - The findings are consistent with diabetic microvascular damage. Correlation with clinical examination and OCT imaging is recommended where appropriate.
- Performance Reference:
 - Accuracy: 0.947 | F1-score: 0.938 | AUC: 0.971
 - VisionAI is intended for decision support and audit assistance.
