What this means

The AI detected changes in the retina that are commonly associated with diabetic eye disease. Lesions are areas where blood vessels are damaged or leaking. Early detection helps preserve vision.

Care Plan — Immediate Steps

- Book an appointment with an eye specialist as recommended.
- Maintain tight blood sugar control (consult your physician).
- Avoid heavy physical strain until evaluated (if bleeding suspected).
- Follow nutrition tips: leafy greens, omega-3 (fish), vitamin-rich diet.
- Regular follow-up imaging as instructed by your doctor.

Important

This is not a medical diagnosis. Please consult an ophthalmologist for definitive care.
